

RED LINE FUEL SYSTEM WATER REMOVER & ANTIFREEZE

- Removes water from diesel or gasoline systems, treats up to 250 gallons
- Significantly reduces the freezing point of water in the fuel system
- Also provides excellent fuel lubrication
- Can be used in combination with SI-1 Complete Fuel System Cleaner, Diesel Fuel Catalyst, and 85 Plus

PACKAGE SIZES:

60302 – Fuel System Water Remover & Antifreeze -12oz

ADDITIONAL INFORMATION

Fuel System Antifreeze and Water Remover is designed to disperse controlled amounts of water in diesel fuel or gasoline in order to eliminate contamination and condensation in fuel tanks and to prevent the water from freezing in the fuel lines or filters – a major cause of engine shutdown or poor startability in cold weather. One ounce per 20 gallons is recommended and will disperse one ounce of water in very tiny droplets and will reduce the freezing point to -5°F (-21°C). More can be used for greater contamination. Lubricants will lubricate the water and fuel phases, preventing damage to injectors and pumps. The lubricated water phase actually provided lower wear than diesel alone. This additional lubricant will reduce friction sufficiently even in dry fuel to provide diesel engine efficiency improvements between 2-3% based on fleet and dyno tests. Other water “removal” products use alcohols or glycol ethers to ‘dry’ fuels, but after several treatments, the water and alcohol still remains.
